

# DESIGN TECHNOLOGY KNOWLEDGE ORGANISER

## Topic: Cam Toy Project

YEAR 8 DT

### My Tool Box

**Pin Hammer** – Used to knock panel pins and small nail into wood.

**Coping Saw** – Used to cut curves and internal shapes in wood.

**Tenon Saw** – Used to cut straight lines in wood.

**Bench hook** – Used to hold work in place when cutting

**Wood Vice** – Used to secure material while working on it (cutting, filing sanding etc.)

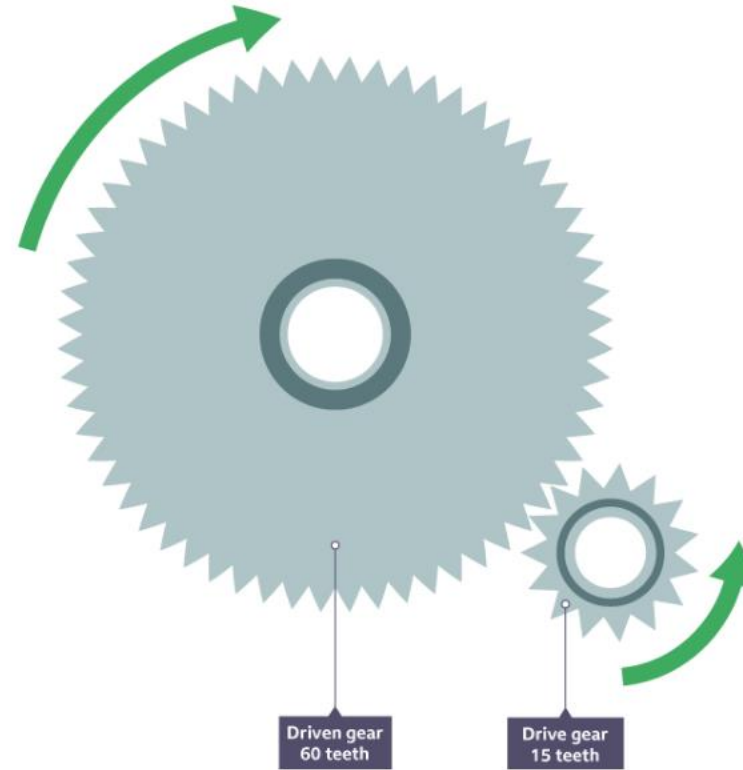

**Scroll-Saw/Hegner-Saw**- Used to cut complicated shapes in thin material.

**Pillar/Bench Drill** – Used to drill holes into different materials.

### Gear trains

Gear trains are when two or more gears are joined together. In a simple gear train, the drive gear causes the driven gear to turn in the opposite direction

Smaller gears with fewer teeth turn faster than larger gears with more teeth. This difference in speed is called the gear ratio.

**Gear ratio = number of teeth on driven gear ÷ number of teeth on the drive gear**

#### Example

The driven gear has 60 teeth and the drive gear has 15 teeth.

$$\text{Gear ratio} = 60 \div 15 = 4$$

For each rotation of the drive gear, the driven gear would rotate four times.

$$\text{Gear ratio} = 4:1$$

This is known as gearing up. If the driven gear had 15 teeth and the drive gear had 60 teeth, the gear ratio would be 4:1 which is known as gearing down.

### Key Terms

**Aesthetics**- how humans perceive and judge objects according to their attractiveness

**Softwood** - the wood from a conifer (such as pine, fir, or spruce)

**Pine wood** - an evergreen coniferous tree which has clusters of long needle-shaped leaves.

**Manufactured Board** – timber sheets which are produced by gluing wood layers or fibers together (such as MDF, Plywood and Chipboard)

**Medium-density fibreboard (MDF)** – an engineered wood product made from wood fibres and resin binder (glue)

**Plywood** – is a composite material. It is composed of individual plies/veneers of wood. It is very strong due to the way the plies are put together. The grain of each ply is positioned at ninety degrees to the pieces of ply above and below it.

**Ratio** - the relation between two amounts showing the number of times one value contains or is contained within the other

### Tasks

**Task 1:** Learn the tool names and their use.

**Task 2:** Learn the key words and the definition.

**Task 3:** Create 4 questions that can be answered from the information in the focused topic column.

**Task 4:** Draw two tools and write what they are for.

**Task 5:** Create a quiz based on task 1, 2 or 3. Get someone to test you.

**Task 6:** Create a mind map for the information you remember and red pen anything you've forgotten.

**Task 7:** Teach it. Create a task that can be used to teach some of the information from here.
